To Whom It May Concern

" FOR INFORMATION ONLY"

Environmental Statement:

Miraton/Geoquartz/Chramant manufactured by Daelim Concrete Products Ltd..

Styles: White Mirror (OM02) and Black Mirror (DM01)

Quartz is the most abundant mineral on earth. It is most usually mined as a bi-product of other mining activities, and generally makes extensive use of scrapped mine content including crushed stone. Compound stone such as the type we manufacture can be described as environmentally friendly as up to 93% of its content comes from crushed waste stone left over in quarries or from natural stone beds. Therefore, to manufacture our compound stone it is not necessary to open new quarries inevitably defacing the environment. Our compound stone contains bonding agents which are transformed into inert materials during the manufacturing process therefore the final product does not produce any form of allergen making this type of product the ideal stone solution for any location. These resins, binders, and pigments compose the other 7% of the material.

The percent of recycled content and reused content varies by production lot but averages 93%.

This recycled and reused content can be roughly categorized as follows:

47-61% Crushed stone

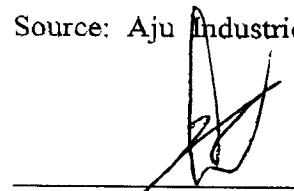

Source: Various

Type: 100% Post Industrial

32-46 % Recycled Mirror Chips

Source: Aju Industries (Korea)

Type: Post consumer
